STEM Career Descriptions

Teaching computers to “see” and understand pictures and videos.

Designing and building rollercoasters and other models at Legoland.

Using data to find musical trends and creating the Billboard Top 100 charts that show the most popular artists.

Researching data to calculate sports statistics and recommending plays and tactics based on models of past data.

Navigating a robot across the surface of Mars.

Working for banks, hospitals, or even the government to break into their computer systems and tell them how you did it.

STEM careers involve a lot more than just science and math. What other skills or interests do the jobs on this page require?
